PROJECT REPORT

NAME :- SHANTANU RAVNDRA RATHOD

REGISTRATION NO. :- 25BCY10202

BRANCH :- CYBERSECUITY AND DIGITAL FORENSIC

SUBJECT :- DIGITAL LITERECY

DATE :- 30-03-2026

TASK-1

For Task 1, I created a digital literacy awareness infographic using Canva. I used Canva AI features to generate a clean and simple design, and then I edited it to make it look more natural and easy to understand. The main aim of my design was to explain important digital literacy concepts in a simple way for first-year students.

My infographic covers topics such as what digital literacy means, useful digital tools for students like GitHub and LinkedIn, safe internet practices, and basic email etiquette. I used short points and simple icons to make the content visually clear and easy to read. I made sure not to overcrowd the design so that it remains neat and understandable.

One interesting part of this task was using Canva, as it made designing very easy even without prior experience. However, I found it slightly difficult to balance the amount of text and visuals, as too much information made the design look cluttered. Overall, this task helped me learn how to present information in a simple and effective way.

TASK – 2

In Task 2, I created and updated my digital profiles on different platforms such as GitHub, LinkedIn, and HackerRank. These platforms are very useful for students as they help in building a professional online presence and improving technical skills.

On GitHub, I created my profile and added a README section with basic information about myself, including my branch and learning goals. GitHub is mainly used for storing projects and showcasing coding work. On LinkedIn, I updated my education details and created a simple professional profile. LinkedIn helps in networking and connecting with professionals. I also created a HackerRank account, which is useful for practicing coding problems and improving problem-solving skills.

Through this task, I understood the importance of maintaining a digital presence from the early stage of my career. In the next four years, I plan to regularly update these platforms, upload my projects, and improve my skills. This will help me during internships and placements in the future.

TASK – 3

For Task 3, I explored coding and collaboration platforms. I created an account on HackerRank and solved a beginner-level problem. This helped me understand how coding platforms work and how they can be used to improve programming skills. Practicing such problems regularly can help in developing logical thinking and preparing for technical interviews.

In the second part of this task, I created a Google Form as a Digital Literacy Awareness Quiz. The form included five simple questions related to digital literacy, online safety, and basic concepts like UPI and professional platforms. I also viewed the responses in Google Sheets, which showed how data can be collected and analyzed easily.

This task helped me learn how to use online tools for both learning and collaboration. Platforms like HackerRank are useful for skill development, while Google Forms can be used for surveys and quizzes. These tools will be helpful in my academic journey for assignments, projects, and group work.

TASK – 4

In Task 4, I learned about professional communication and email etiquette. I wrote two formal emails—one to request an assignment extension and another to apply for a summer internship. While writing these emails, I focused on maintaining a proper structure, including subject line, greeting, clear message, and polite closing.

I also created a checklist of do's and don'ts for responsible social media use. This helped me understand how important it is to behave properly online and maintain a good digital image.

A common problem in digital communication is misunderstanding due to unclear or informal messages. For example, sending incomplete or rude emails can create a negative impression. This can be avoided by writing clear, polite, and well-structured messages. Overall, this task improved my understanding of professional communication.

TASK – 5

In Task 5, I learned about cybercrime, especially UPI and online payment fraud. While researching this topic, I was surprised to see how easily people can be tricked through fake calls, links, and payment requests. Many people lose money because they are not aware of such scams.

I also created a case study and a prevention checklist, which helped me understand how these frauds happen and how they can be avoided. One important thing I learned is that we should never share OTPs or approve unknown payment requests.

After this task, I will be more careful while using online payment apps and will always verify before taking any action. This task increased my awareness about online safety and made me more responsible while using digital platforms.

CONCLUSION

This project helped me understand the importance of digital literacy in student life. I learned how to use different online platforms, create professional profiles, communicate properly through emails, and stay safe from cyber threats. Each task gave me practical knowledge that I can use in my daily life and future career.

Overall, this project improved my awareness, skills, and confidence in using digital tools. It also motivated me to continue learning and improving myself in the field of technology.

THANK YOU
